

Hi Nick,

I see that you would like to have a personal demo for the matrix-hookshot integration for OpenProject, however, I have a problem giving a demo synchronously over a video call. I have a problem with giving a presentation and a code walkthrough. The reason is simply that I have a speech impediment to be able to hold on to a conversation. It's been more than two years since I have had a video call with anyone - the reason being I am scared of the technology that supports those video calls - I have severe problems with privacy and anonymity. Also, I find such a video conversation/presentation quite useless. What's the point of all these - when things are happily well over asynchronous communication media such as email and messages. I remember making a phone call over Element last year or before and I could not reach. You apologised for being unresponsive later - I just find that not enough - I needed feedback and help back then and I did not receive any response. You would see the messages that I sent but would not care to respond for long times. Why should I make an exception and respond to your meetings promptly on the cue? Just because OPF and you find my projects, it does not mean you

take me for granted - as if I am expendable at your disposal.

I read your email regarding the 'next steps' you and OpenProject team would like to take - it just means I get no payment from hereon for the invoice that I have already sent for April or the future ones. Well, I am totally fine with it - I do this work not in the expectation of funds or invoice payment frequently but because to beat my boredom. This happens to be the only craft I seem to be good at: software development - I will continue to do that irrespective of whatever happens. That's probably one of the things that keeps my boredom away apart from writing - they're probably the ones that is postponing my death!

On another note, I would like to express my gratitude to OpenProject Foundation (OPF) and you for supporting my work so far, whatever the situation has been. Thanks for that, and hopefully in future I ~~can~~ could build bridges (integrations) that brings in more value to the Community and the businesses that rely on those.
